

The graph displays the percentage of the population in different age groups for various countries. The x-axis represents age groups in 5-year intervals (except for the final group, 86+), and the y-axis represents the percentage of the population, ranging from 0 to 100. The lines represent different countries, with colors corresponding to the legend. The graph shows that younger age groups (0-15) generally have a higher percentage of the population in most countries, while older age groups (60+) have a lower percentage. The lines for different countries are closely clustered, indicating similar age distributions across the countries shown.
